

## Conductivity Measurements

### Conductivity Meters – The Electrolytical Conductivity

Conductivity is a parameter used to measure electrical properties of a solution. The more salt, acid or alkali in a solution, the greater its conductivity. The unit of conductivity is S/m, often also S/cm.

The scale for aqueous solutions begins with pure water at a conductivity of 0.05  $\mu\text{S}/\text{cm}$  (25 °C/77 °F). Naturally occurring waters such as drinking water or surface water have a conductivity in the range 100 – 1000  $\mu\text{S}/\text{cm}$ . At the upper end of the chart some acids and bases can be found.

Conductivity measurements are used for applications such as in the production of ultrapure water or determining the salinity of saltwater.

Conductivity is measured by making a measurement of the electrical resistance. The simplest kind of measuring cell used consists of two similar electrodes. An alternating voltage applied to one of the electrodes causes the ions in the solution to migrate towards the electrodes. The more ions in the solution, the greater the current which flows between the electrodes. The instrument measures the current and uses Ohm's law to calculate first the conductance of the solution and then – by taking the cell data into account – the conductivity.

# Laboratory Conductivity Meters

Conductivity is an important parameter in monitoring water quality. In the laboratory sector this parameter has increased in importance since the introduction of pharmacopeia standards for pharmaceutical water. WTW inoLab® laboratory conductivity instruments meet all the requirements for measurements according to this standard.

## inoLab® Cond 720/7200\*

- Application specific displays
- Touch-sensitive keypad with pressure point and tactile response
- Battery or AC power operation

### Simple and reliable

Routine laboratory conductivity meter with large multi-functional display, simultaneous display of temperature and automatic temperature compensation. 20 °C or 25 °C (68 °F or 77 °F) can be set as reference temperature. Both TDS and salinity measurements are possible as well as conductivity and temperature. The ability to set different cell constants means that other special conductivity cells can be connected, including the TetraCon® 325 4-electrode conductivity cell and LR 325/01 ultrapure water conductivity cell.

## inoLab® Cond 730/7300\*

- Simplified operator convenience
- GLP documentation via PC or optional built-in printer
- Meets all the requirements according to pharmacopeia

### Compact and precise

Standard laboratory conductivity meter with large multifunctional display, simultaneous display of temperature and automatic temperature compensation. The data logging capability and the real-time clock allows for all GLP functions. Data output can take place via the optional built-in printer on thermal paper accepted for use for official documents or via the built-in RS 232 digital interface via a PC or external printer.

20 °C or 25 °C (68 °F or 77 °F) can be set as reference temperature. Both TDS and salinity measurements are possible as

well as conductivity and temperature. The ability to set different cell constants means that other special conductivity cells can be connected as well as the TetraCon® 325 4-electrode conductivity cell and LR 325/01 ultrapure water conductivity cell.

*\* North American version*

## inoLab® Cond 740/7400\*

- Meets all the requirements according to pharmacopeia
- TDS and salinity measurement
- External control with MultiLab® pilot via PC

### With Terminal or PC software: flexible and powerful

High-performance laboratory conductivity meter with graphic display and digital recorder function, simultaneous display of temperature, and automatic temperature compensation. A built-in data logger and a real-time clock allows for all QA conforming functions. The optional built-in printer allows data printout on thermal paper accepted for use in official documents. 20 °C or 25 °C (68 °F or 77 °F) can be set as reference temperature. Both TDS and salinity measurements are possible as well as conductivity and temperature. The ability to set different cell constants means that other special conductivity cells can be connected as well as the TetraCon® 325 4-electrode conductivity cell and LR 325/01 ultrapure water conductivity cell.

A PC keyboard interface allows an external keyboard or a barcode reader to be connected.

### Additional features

- Built-in digital recorder
- Real-time graphic display
- User selectable languages
- Multi-level GLP functions (password-protected operator levels)
- Limit input with acoustic alarm
- Meets all the requirements according to pharmacopeia
- Free-of-charge software downloads for MultiLab® pilot or terminal

# Portable Conductivity Meters

## ProfiLine Conductivity Field Meters

The WTW conductivity meter ProfiLine Cond 1970i, supplied with integrated powerful NiMH rechargeable batteries, is both waterproof (IP 66) and submersible (IP 67). Along with an 800 data file data logger, a real time clock and recorder output, the ProfiLine Cond 1970i conforms to all GLP requirements.

### ProfiLine Cond 1970i

- Highly precise, indestructible, waterproof
- Large, silicone keys for field use
- Large, easy-to-read display
- Measurement down to depths of 100 m (330 ft)

Convenient handle and carrying strap included.

The Cond 1970i is suitable for depth measurements down to 100 m (330 ft) in combination with the TA 197 LF depth armature.

### TA 197 LF

Conductivity depth armature TA 197 LF with built-in temperature probe, up to 100 m (330 ft) cable with waterproof plug (IP 67), pressure-resistant steel armor (material VA 1.4571) with screw-off protective hood, pressure-resistant to max. 10 bar, fits into small boreholes (2" dia.).

## ProfiLine Cond 3210/3310

- Special cells can be connected
- Also measures specific resistance and TDS
- For measurements according to pharmacopeia

The versatile Cond 3210: Easily perform conductivity measurements in a wide variety of samples with either two- and/or four-electrode cells using this flexible meter, which offers the additional option of measuring with linear or without temperature compensation.

Automatically store or transmit data series: The Cond 3310 corresponds with the Cond 3210, with the added feature of an interval-controlled data logger. With a large memory

capacity and a waterproof USB interface, the Cond 3310 is ideal for collecting large amounts of data, such as pumping tests that require date, time and ID number.

## VARIO® C<sub>ond</sub>

- Touch screen
- Large operating range
- Plug-in cells – no cables

### Simple measurement at your fingertips – now also available for conductivity measurement

VARIO® C<sub>ond</sub> is an outstanding value. This economical meter is ideal for use in process control monitoring or anywhere that a small, accurate meter is needed. The VARIO® is small, light, handy, waterproof and has a robust firm-grip rubber armor.

### Miniature precision

The globally renowned measurement cell TetraCon® 325 was modified exclusively for the VARIO® C<sub>ond</sub>. With an extra ultrapure water cell and flow vessel the VARIO® C<sub>ond</sub> is uniquely suited for ultrapure water analysis.

With increased precision through the omission of cable connectors, the VARIO® C<sub>ond</sub> is an appropriate solution for servicing and maintaining water treatment equipment. No matter whether using it for pure water measurement in semi-conductor industry or in cell culture laboratories, the pure water conductivity cell with flow-through vessel always allows a rapid and easy control measurement.

### Long lasting power.

VARIO® C<sub>ond</sub> offers up to 500 hours of continuous operation with just one standard battery. The low-power technology shuts down the device after 10 minutes in standby. Changing the battery is quick and easy.

# Conductivity Cells

The TetraCon® 4-electrode system sets the standard for professional conductivity measurements. When compared to conventional 2-electrode conductivity cell, the TetraCon® cells offer a high degree of precision, wider measuring range and minimal immersion depth needed for measuring. Additionally, these superior cells eliminate errors caused by polarization effects, and from dirty samples.

## TetraCon®

In comparison with conventional measuring cells with 2 electrodes, the TetraCon® conductivity cell offers numerous technical advantages:

- Highest degree of precision and linearity by optimized cell geometry
- Extremely large measuring range with just one cell
- Long-term cell constant stability with high-quality abrasion-resistant graphite electrodes
- With built-in temperature probe
- Smallest immersion depth possible
- No measuring errors even with very dirty electrodes – contact resistance on the electrode surface is automatically compensated
- No measuring errors from cable influences
- No measuring errors from primary or secondary polarization effects
- No measuring errors due to contact with side walls or base of measuring vessels
- Robust, unbreakable epoxy body

Kit for measuring the conductivity according to pharmacopeia		Order No.
USP Kit 1	Kit for measuring conductivity according to pharmacopeia, consisting of LR 325/01 Ultrapure water cell, D01/T glass flow-through vessel, NIST traceable 5 $\mu\text{S}$ standard with accuracy $\pm 2\%$ and 6R/SET/LabTesting set	300 569
USP Kit 2	As USP Kit 1, but flow-through vessel made of stainless steel instead of D01/T	300 568
Calibration agents		Order No.
KS 100 $\mu\text{S}$	Calibration standard 100 $\mu\text{S}/\text{cm}$ , shelf life 2 years, NIST traceable with accuracy $\pm 3\%$ (300 ml)	300 578
KS 5 $\mu\text{S}$	Calibration standard 5 $\mu\text{S}/\text{cm}$ , shelf life 1 year, NIST traceable with accuracy $\pm 2\%$ (300 ml)	300 580
E-SET Trace	Calibration set (6 x 50 ml bottles calibration and control standard, KCl 0.01 mol/l), NIST traceable with accuracy $\pm 0.5\%$	300 572

## Flow-through vessels

Trace conductivity cell LR 325/001  
with stainless steel flow-through vessel

Glass flow-through vessel D01/T  
with ultrapure water cell LR 01 V

**Ordering Information Flow-through Vessels**

For LTA 1, LTA, LTA 01 and TFK 530		Order No.
D 530	Flow-through vessel of transparent PVC, suitable for conductivity cells and temperature probes, I.D. 44 mm, V*=97 ml	108 060
For TetraCon® 325		Order No.
D 201	Flow-through vessel of transparent PVC, I.D. 18 mm, V*=13 ml	203 730
For TetraCon® 96, LTA 100 and KLE 1		Order No.
D 1/T	Flow-through vessel, glass I.D. 24 mm, V*=36 ml	302 730
For LR 01/T and LTA 01		Order No.
D 01/T	Flow-through vessel, glass I.D. 18 mm, V*=17 ml	302 750

V\* = filling volume without sensor
